PROFESSIONAL SUMMARY

Analytically driven Computer Science graduate with hands-on experience gathering business requirements, analyzing data, and delivering actionable insights through dashboards and reports. Proficient in SQL, Python, Power BI, Tableau, Excel (including Macros/VBA), and PowerPoint reporting. Proven ability to collaborate cross-functionally, translate business needs into data-driven solutions, and communicate findings clearly to non-technical stakeholders. Eager to apply these skills in a Co-Op setting with a genuine interest in how data analytics drives innovation and efficiency in manufacturing and automotive engineering. U.S. Naturalized Citizen no sponsorship required.

TECHNICAL SKILLS

- **Analytics & Reporting:** Requirements Gathering, KPI Tracking, Trend Identification, EDA, Data Mining, Statistical Analysis, Root Cause Analysis
- **Visualization &** BI: Power BI (DAX), Tableau, Excel (Pivot Tables, Power Query, VBA/Macros), PowerPoint Reporting, Matplotlib, Seaborn, ggplot2
- **Data & Databases:** SQL (PostgreSQL, MS SQL Server, MySQL), CTEs, Window Functions, Stored Procedures, Query Optimization, ETL/ELT
- **Programming:** Python (Pandas, NumPy, Scikit-learn, Matplotlib), R (Tidyverse, dplyr, ggplot2), JavaScript, Bash Scripting
- **Tools & Process:** Git/GitHub, Docker, Azure DevOps, Jira, Agile/Scrum, Technical Documentation, Stakeholder Collaboration

EDUCATION

University of Wisconsin – River Falls | River Falls, WI

- Bachelor of Science in Computer Science and Information Systems | December 2024

Relevant Coursework: Database Systems, Data Science, Software Engineering, Object-Oriented Programming, Data Structure Algorithms

CERTIFICATIONS

- IBM data science professional certificate
- Docker Foundations Professional Certificate
- AWS Cloud Practitioner (In Progress)

WORK EXPERIENCE

Development Intern | A Better Road Foundation **2025**

- Gathered and documented business requirements from non-technical stakeholders; translated organizational goals into functional data and web solutions.
- Analyzed datasets using Google Analytics to surface KPI insights directly informing leadership decisions on content and email engagement strategies.
- Designed and deployed end-to-end web platform; built interactive data elements ensuring data integrity and a responsive user experience.
- Implemented SEO best practices and established scalable, repeatable web data reporting workflows for ongoing organizational use

PROJECTS

Business Intelligence: Power BI Dashboard Portfolio | GitHub

Power BI, DAX, SQL

- Built interactive KPI dashboards connected to live SQL databases, enabling real-time visibility into business performance metrics; designed DAX measures for trend analysis and pattern identification to support data-driven decision-making across business units.
- Performed end-to-end ETL including data cleansing, validation, and transformation; developed data accuracy checklists and optimized queries using indexing and stored procedures to ensure report consistency.

Retail Intelligence: Coffee Shop Sales Dashboard | GitHub

Excel, PivotTables, Power Query

- Analyzed large-scale transaction datasets to identify peak revenue periods, customer purchasing behavior, and product margins in support of business planning; engineered Excel Macro-based KPI dashboards with PivotTables and charts for executive-ready reporting.
- Applied advanced data validation and Power Query transformations to ensure full accuracy in financial reporting; created reusable PowerPoint and charting templates to relay results clearly to business stakeholders.

Relational Database Design & SQL Optimization (COVID-19) | GitHub

SQL, MS SQL Server, CTEs, Window Functions

- Authored 12+ complex SQL queries using Window Functions, CTEs, and Self-Joins to transform raw global health data into structured analytical views for stakeholder reporting; applied NULL filtering and data validation constraints to maintain high data integrity.
- Optimized query performance via strategic indexing and stored procedures, improving data retrieval speed for regional summary reporting.

Titanic Survival Prediction | GitHub

Python, Scikit-learn, Pandas, Matplotlib, Seaborn

- Performed end-to-end data wrangling handling missing values, feature engineering, and normalization; built and evaluated classification models (Logistic Regression, Random Forest) with visualizations communicating findings to non-technical audiences.

Minneapolis Rental Licenses Time-Series Analysis | GitHub

R, ggplot2, dplyr, lubridate

- Analyzed local rental market trends using R, engineering date-based features to enable time-series analysis of license issuance patterns; created ggplot2 visualizations communicating seasonal patterns to support data-driven decision-making.

Public Interest Data Pipeline: Chicago Urban Analysis | GitHub

Python, Pandas, Jupyter Notebooks

- Engineered a data pipeline to process diverse urban datasets (socio-economic, education, population) to identify service gaps; cleaned and normalized messy public data and developed automated reporting modules to communicate demographic trends to non-technical stakeholders.
