PROFESSIONAL SUMMARY

Analytically driven Computer Science graduate with hands-on experience gathering business requirements, analyzing data, and creating actionable insights through dashboards and reports. Proficient in Python, SQL, Power BI, Tableau, and Excel. Proven ability to collaborate cross-functionally, translate business needs into functional data solutions, and communicate findings clearly to non-technical stakeholders. U.S. Naturalized Citizen , no sponsorship required.

EDUCATION

University of Wisconsin – River Falls | River Falls, WI

- **Bachelor of Science in Computer Science and Information Systems | December 2024**
  Relevant Coursework: Database Systems, Data Science, Software Engineering, Object-Oriented Programming, Data Structure Algorithms

CERTIFICATIONS

- IBM data science professional certificate
- Docker Foundations Professional Certificate
- AWS Cloud Practitioner (In Progress)

WORK EXPERIENCE

Development Intern | A Better Road Foundation **2025**

- Gathered and documented business requirements from non-technical stakeholders; translated organizational goals into functional data and web solutions.
- Analyzed datasets using Google Analytics to surface KPI insights — directly informing leadership decisions on content and email engagement strategies.
- Designed and deployed end-to-end web platform; built interactive data elements ensuring data integrity and a responsive user experience.
- Implemented SEO best practices and established scalable, repeatable web data reporting workflows for ongoing organizational use

TECHNICAL SKILLS

- **Analytics & Reporting:** Requirements Gathering, KPI Tracking, Trend Identification, EDA, Data Mining, Statistical Analysis
- **Visualization & BI:** Power BI (DAX), Tableau, Excel (Pivot Tables, Power Query, VBA/Macros), Matplotlib, Seaborn, ggplot2
- **Data & Databases:** SQL (PostgreSQL, MS SQL Server, MySQL), CTEs, Window Functions, Stored Procedures, Query Optimization, ETL/ELT
- **Programming:** Python (Pandas, NumPy, Scikit-learn, Matplotlib), R (Tidyverse, dplyr, ggplot2), JavaScript, Bash
- **Tools & Process:** Git/GitHub, Docker, Azure DevOps, Jira, Agile/Scrum, Technical Documentation, Stakeholder Collaboration

PROJECTS

Business Intelligence: Power BI Dashboard Portfolio | GitHub

Power BI, DAX, SQL

- Built interactive KPI dashboards connected to live SQL databases, enabling real-time visibility into business performance metrics for non-technical stakeholders.
- Performed end-to-end ETL including data cleansing, validation, and transformation; optimized queries using indexing and stored procedures.
- Designed DAX measures for trend analysis and pattern identification, directly supporting data-driven decision-making across business units.

Retail Intelligence: Coffee Shop Sales Dashboard | GitHub

Excel, PivotTables, Power Query

- Analyzed large-scale transaction datasets to identify peak revenue periods, customer purchasing behavior, and product margins to drive operational decisions.
- Engineered dynamic KPI dashboards using PivotTables and charts, enabling executive-ready reporting on sales trends and inventory performance.
- Applied advanced data validation and Power Query transformations to ensure full accuracy in financial reporting.

Relational Database Design & SQL Optimization (COVID-19) | GitHub

SQL, MS SQL Server, CTEs, Window Functions

- Authored 12+ complex SQL queries using Window Functions, CTEs, and Self-Joins to transform raw global health data into structured analytical views for stakeholder reporting.
- Applied NULL filtering and data validation constraints to maintain high data integrity; optimized query performance via strategic indexing.

Titanic Survival Prediction | GitHub

Python, Scikit-learn, Pandas, Matplotlib, Seaborn

- Performed end-to-end data wrangling handling missing values, feature engineering, and normalization to produce a clean, model-ready dataset.
- Built and evaluated classification models (Logistic Regression, Random Forest); developed visualizations to communicate survival patterns across demographics to non-technical audiences.

Minneapolis Rental Licenses Time-Series Analysis | GitHub

R, ggplot2, dplyr, lubridate

- Analyzed local rental market trends using R, engineering date-based features to enable time-series analysis of license issuance patterns across multiple years.
- Created ggplot2 visualizations communicating volume trends and seasonal patterns to support data-driven decision-making in a local market context.

Public Interest Data Pipeline: Chicago Urban Analysis | GitHub

Python, Pandas, Jupyter Notebooks

- Engineered a data pipeline to process diverse urban datasets (socio-economic, education, population) to identify service gaps in metropolitan areas.
- Cleaned and normalized messy public data; developed automated reporting modules to communicate demographic trends clearly to non-technical stakeholders.
